SMB PAIN POINTS

- More and more investments in equipment, instruments, systems, same problems.
- Customer delivery speed cost is challenged with lower and lower price points.
- Labor and skills not enough to cope with complex processes.

Need an efficient usage of data, information, processes and personal available in your business.

PROBLEM
PREDICTION
PROFITABILITY

Map and sense your business.

Deploy your operations solutions faster, explore the future and innovate constantly, sensor, modeling and mapping technologies are affordable to small and medium business.

Visualize your operations.

Our unique technology blends Geo-Spatial-Temporal structures to help you visualize and manage your operation and its model.

Problem Prediction

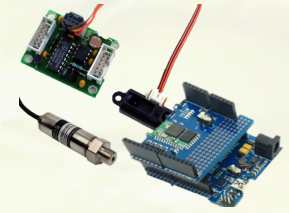

Stop problems before issues start. Use models not your time and money to execute only the parameters which have the best customer solution.

DIGITAL MAPS TO START:

Jump start your digital transformation with your operation model. We design models and simulations to represent your operation flows and integrate signals, from your money, information, materials and work flows, combine them with your data assets on: Geography, economy, transportation, infrastructure and other external sources to create ousting operations results..

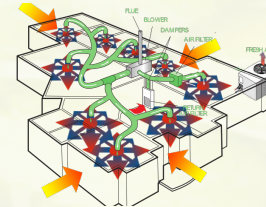

Unlock the value of your current data.

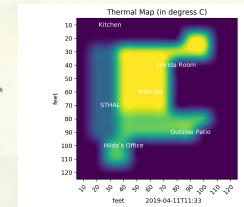

We integrate the latest sensor technology.

DYNAMIC REPRESENTATION OF DATA:

We create flow models' entities for Money, Information, Work and Product for models to visualize the relevant parameters to your decisions on your operation performance. businessATLAS© output incorporates sensors signals your business operation visualization outputs with algorithms to model and simulate operations dynamic behavior for Risk, Order Policy, and Capacity.

Model your operations to gain insights

Geo-spatial-temporal structures to understand.

WIN BY EXPANDING YOUR DATA USAGE:

Resources demand or supply, do not follow a steady predictable consumption or delivery patterns. We create AI models with signals and data to identify and best representation of your data for prediction and pattern recognition. Machine learning allows you to not only automate task, but also perform more consistently and efficiently to deliver to your customers.

Use machine learning to improve operations.

Improve your operation and predict its behavior.

4FLOWS[©]

Our toolset to analyze data across all platforms, vendors, operations and customers in a single value chain management view. Optimizes the connection between your operational efforts and your business results by creating flow models for money, information, work and materials.
